

Library Management System

Python Full Stack Project

Using Django Framework

Presented by: Sravani Rampathoti

Project Overview

- • Web-based library management system
- • Built with Python and Django
- • Automates library operations
- • Easy, secure and user-friendly
- • Uses SQLite database

Project Architecture

- • Model
- • View
- • Template
- • SQLite Database
- • Django ORM

Technologies Used

- • Python
- • Django
- • HTML5
- • CSS3
- • Bootstrap
- • SQLite
- • Git & GitHub

Features

- • View Books
- • Book Details
- • Issue Books
- • Responsive Design
- • Database Integration
- • Easy Navigation

Project Workflow

- 1. Open App
- 2. Home Page
- 3. Books Page
- 4. View Details
- 5. Issue Book
- 6. Database Updated

User Login

- • Current version has no authentication
- • Future: Admin Login
- • Student Login
- • Librarian Login

Books Module

- • View all books
- • Author details
- • Categories
- • Availability status

Issue Books Module

- • Select Book
- • Issue Book
- • Update Database
- • Confirmation Message

Database

- • SQLite Database
- • Book Table
- • ID
- • Book Name
- • Author
- • Category
- • Availability

- • Reduced paperwork
- • Faster management
- • Better accuracy
- • Improved user experience

How to Run

- • Install Python
- • `pip install django`
- • `python manage.py migrate`
- • `python manage.py runserver`

Future Enhancements

- • Authentication
- • Book Return
- • Fine Calculation
- • Search
- • Email Notifications
- • Reports

Contributions

- • Fork Repository
- • Create Branch
- • Commit Changes
- • Push
- • Pull Request
- ★ Star This Repository

Conclusion

- The Library Management System is an efficient Python Django web application for managing library operations.
- Thank You!
